Project, Program, and Portfolio Management (PPPM): Delivering with Excellence

Are your technology projects yielding the results you had planned?

Countless studies have shown that the way projects are planned and managed is a key factor in their success – or failure. Numerous businesses have spent significant time and money investing in state-of-the-art technology, yet have not been able to realize the business benefits they were striving to achieve by deploying the technology. Budgets are overrun, timelines are missed, and objectives are not met. An effective **Project Management** approach must emphasize solid, comprehensive project planning followed by a robust set of project management activities.

Budget and timeline problems – along with other project issues - are exacerbated when you consider **Program Management**, which involves managing several related projects. Prioritization, managing interdependencies, and program level reporting for a large collection of projects requires a high degree of skill and experience.

Portfolio Management addresses an entire set of IT projects and programs across an organization. Investing in the right projects at the right time to provide the right returns is a common challenge faced by both business and IT executives today. Organizations often attempt to do more projects than they have the capacity to do, or spend too much time and money on the wrong projects. Effective Portfolio Management helps companies gain control of their IT project spend by aligning projects with strategic objectives and return on investment criteria.

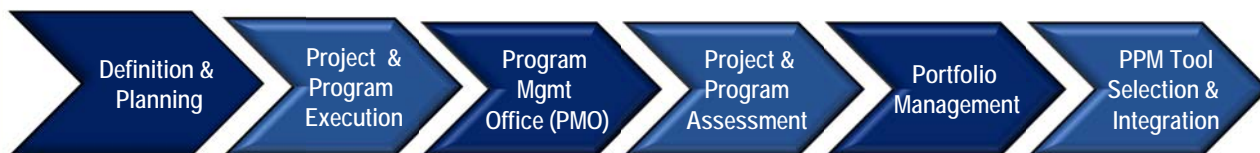

Managing IT projects, programs and portfolios has elements of both an art and a science – and at Jimenez Consulting Solutions, LLC (JCS), we have mastered both. We can help your organization at all levels of the Project, Program and Portfolio Management (PPPM) spectrum, including:

- Managing a single project to a successful conclusion
- Leading the management of large IT programs
- Assessing & managing entire portfolios of IT projects and programs

Jimenez Consulting has the experience to help solve these challenges.

JCS professionals have decades of experience in project, program, and portfolio management. We have provided comprehensive and dynamic project management services across a wide variety of industries and service lines. We offer a range of services designed to help an organization achieve its business objectives. Our services are flexible and can support organizations at any level of maturity, as well as projects of all sizes and degrees of complexity. Our professionals believe in hands-on participation, commitment, involvement and results.

Project, Program and Portfolio Management Solutions

Managing the Journey

Managing a mission-critical project or a comprehensive IT program involves a level of complexity and leadership that many organizations underestimate. JCS can provide experienced professionals to fill these roles, or we can assist your team - working alongside your internal leaders to provide the focus, tools, and processes required for success. We are experienced, professional project leaders who have "been there; done that". We understand the complexities that change has on organizations and the balance that must be struck between the three pillars of project / program management: budget, schedule and quality.

The scope of our PPPM services is both broad and deep, and includes the topics below.
